

The background of the slide is a blue-tinted photograph of the Massachusetts Institute of Technology (MIT) building. The building features a prominent circular dome with the Roman numeral 'MCMXVI' inscribed on it. Below the dome is a portico with several tall columns. The text 'MASSACHUSETTS INSTITUTE OF TECHNOLOGY' is visible on the facade. In the foreground, there are some trees and a few people walking on the steps.

AI Agents to *Autonomous Innovation Engines*

Large organizations are complex

This complexity has
always hindered
innovation

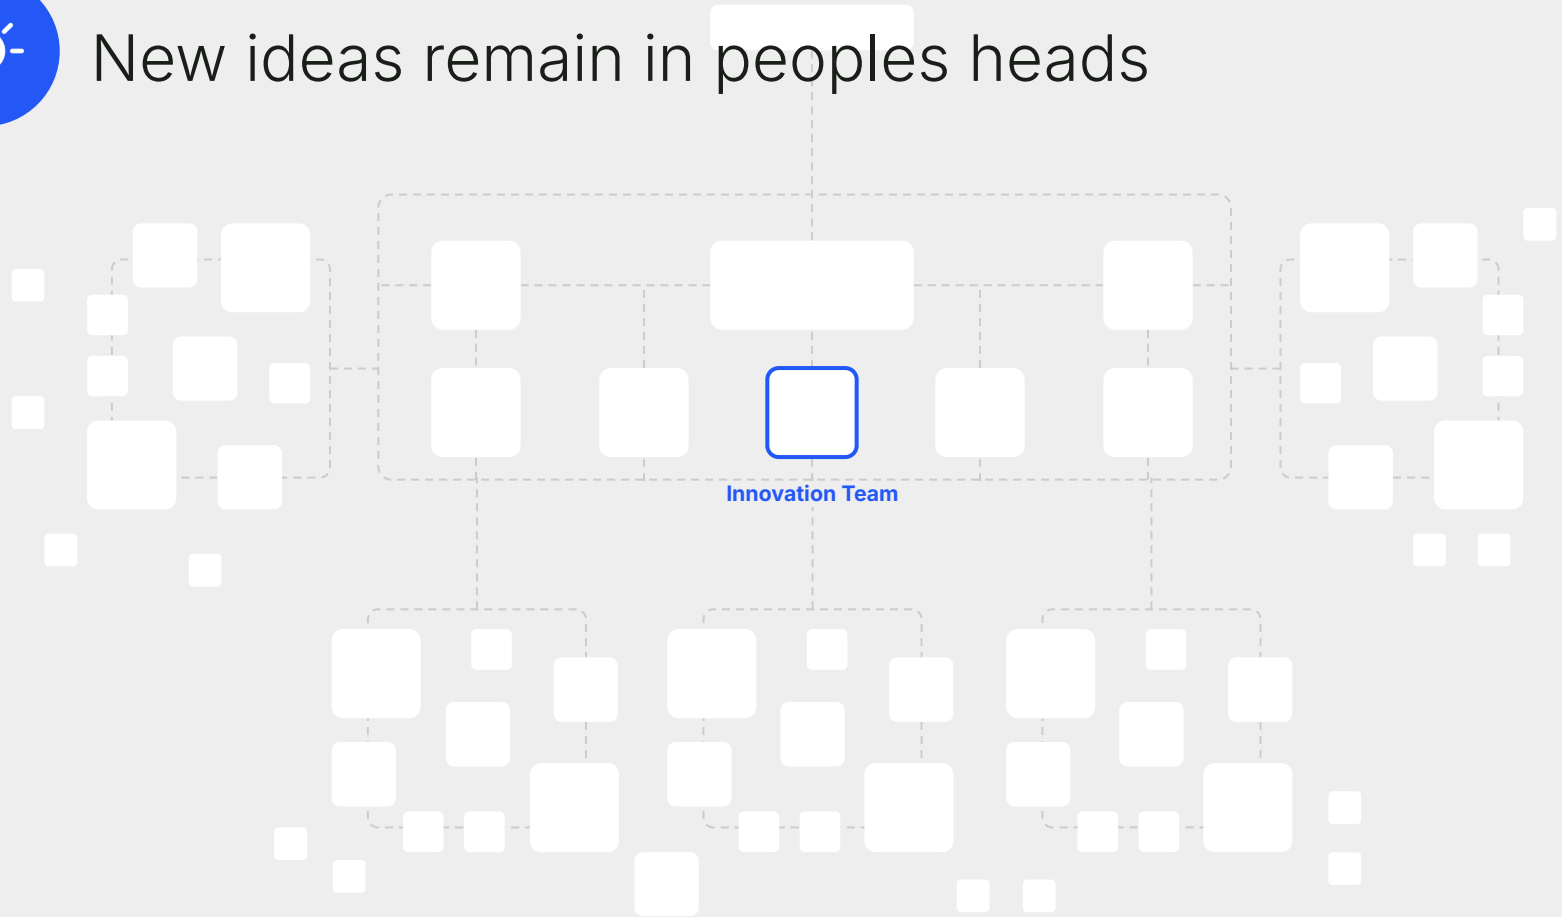

Information gets stuck in silos

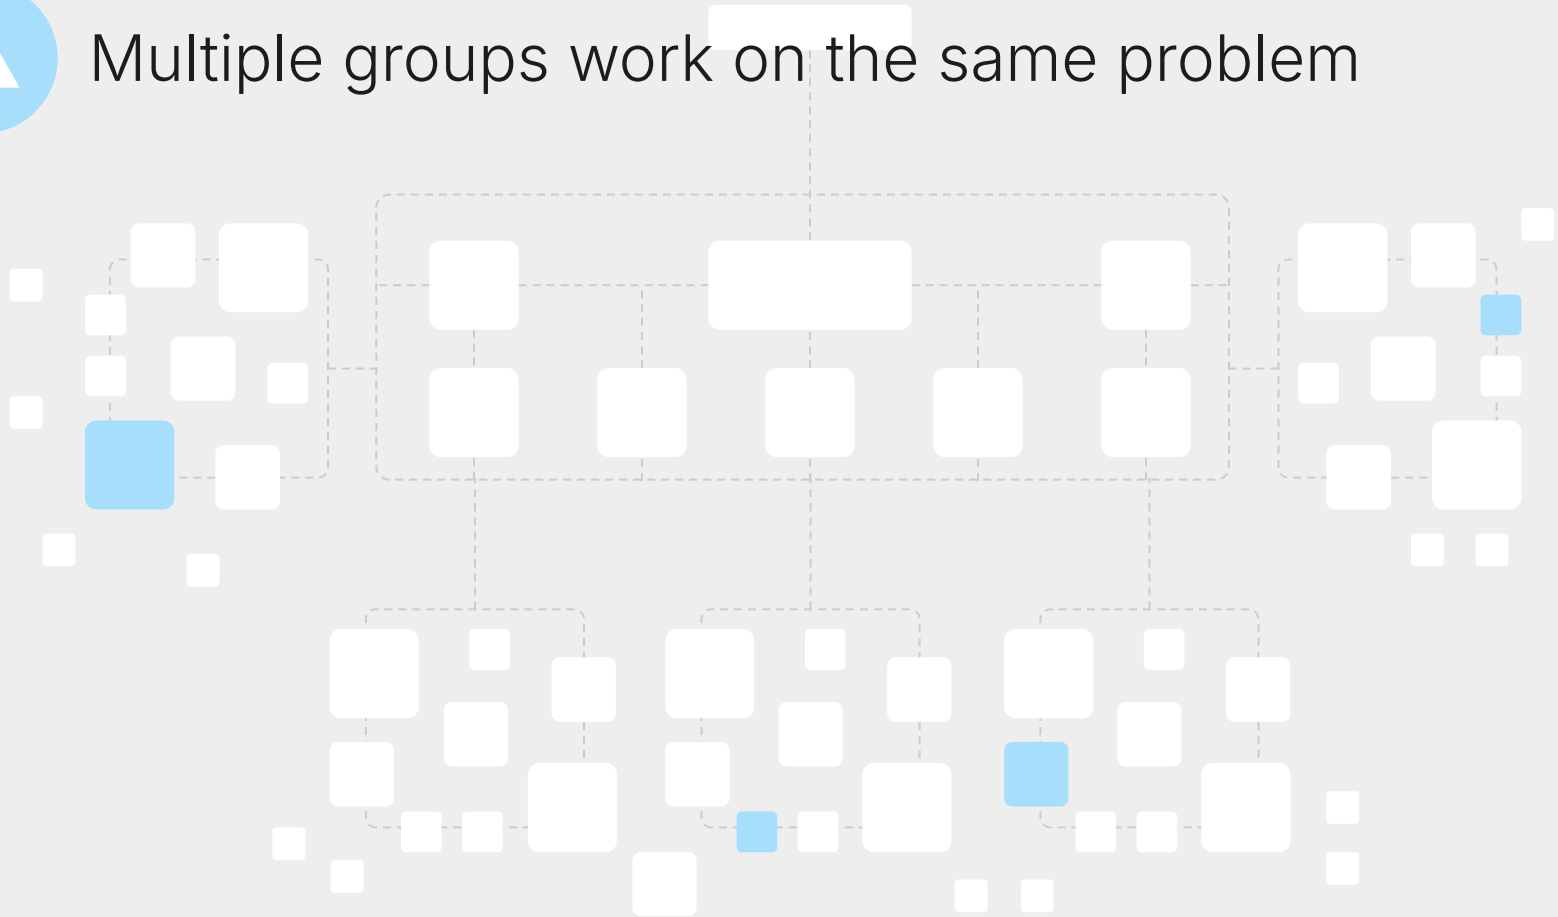

New ideas remain in peoples heads

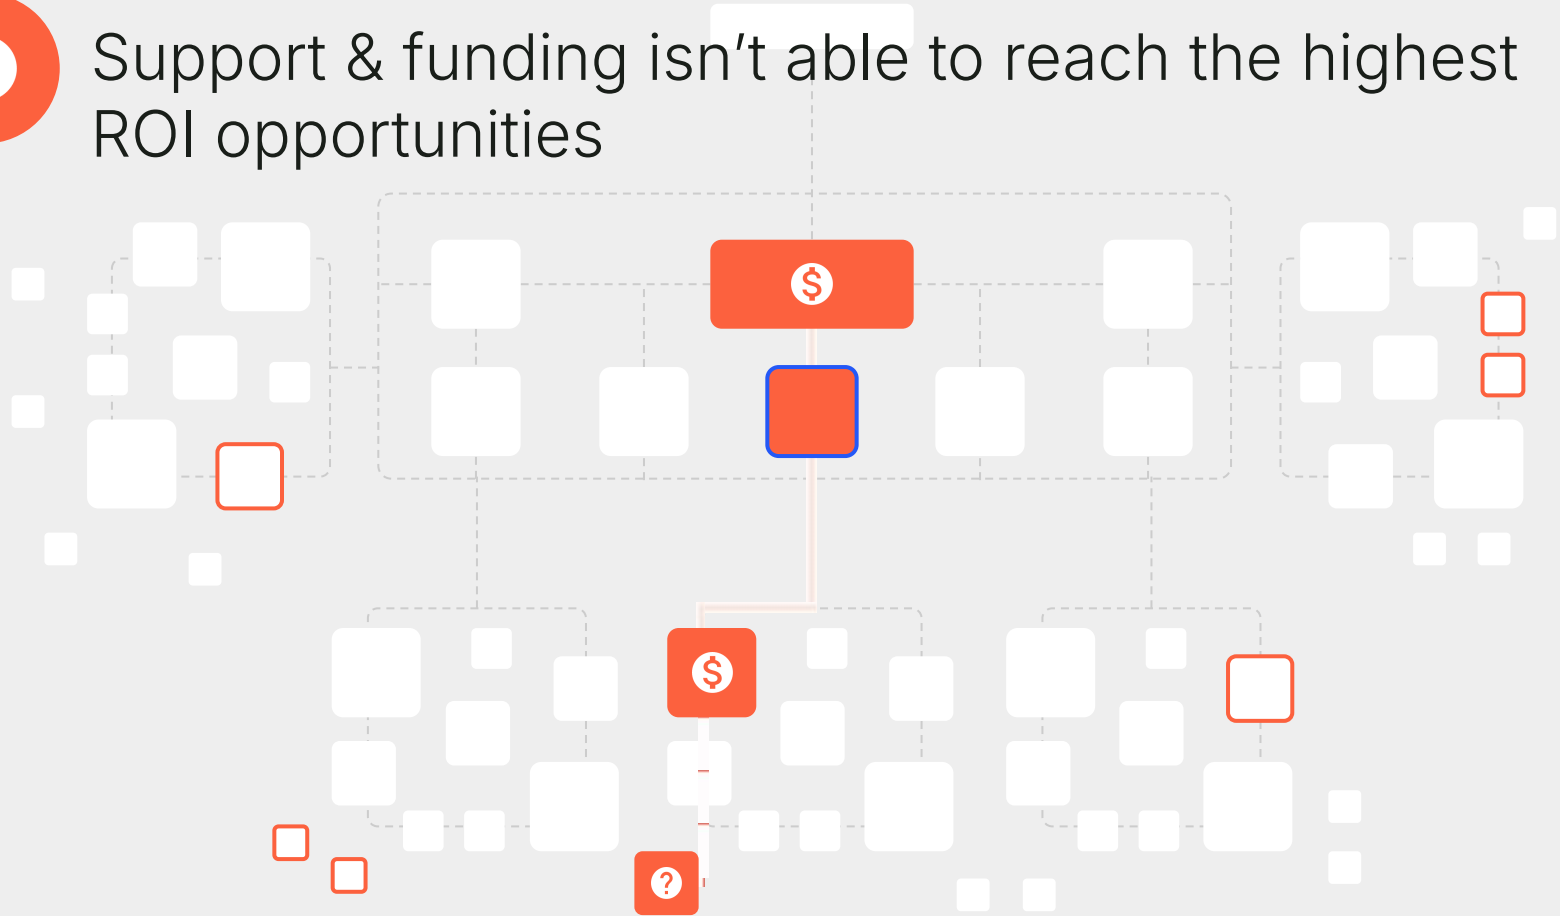

Multiple groups work on the same problem

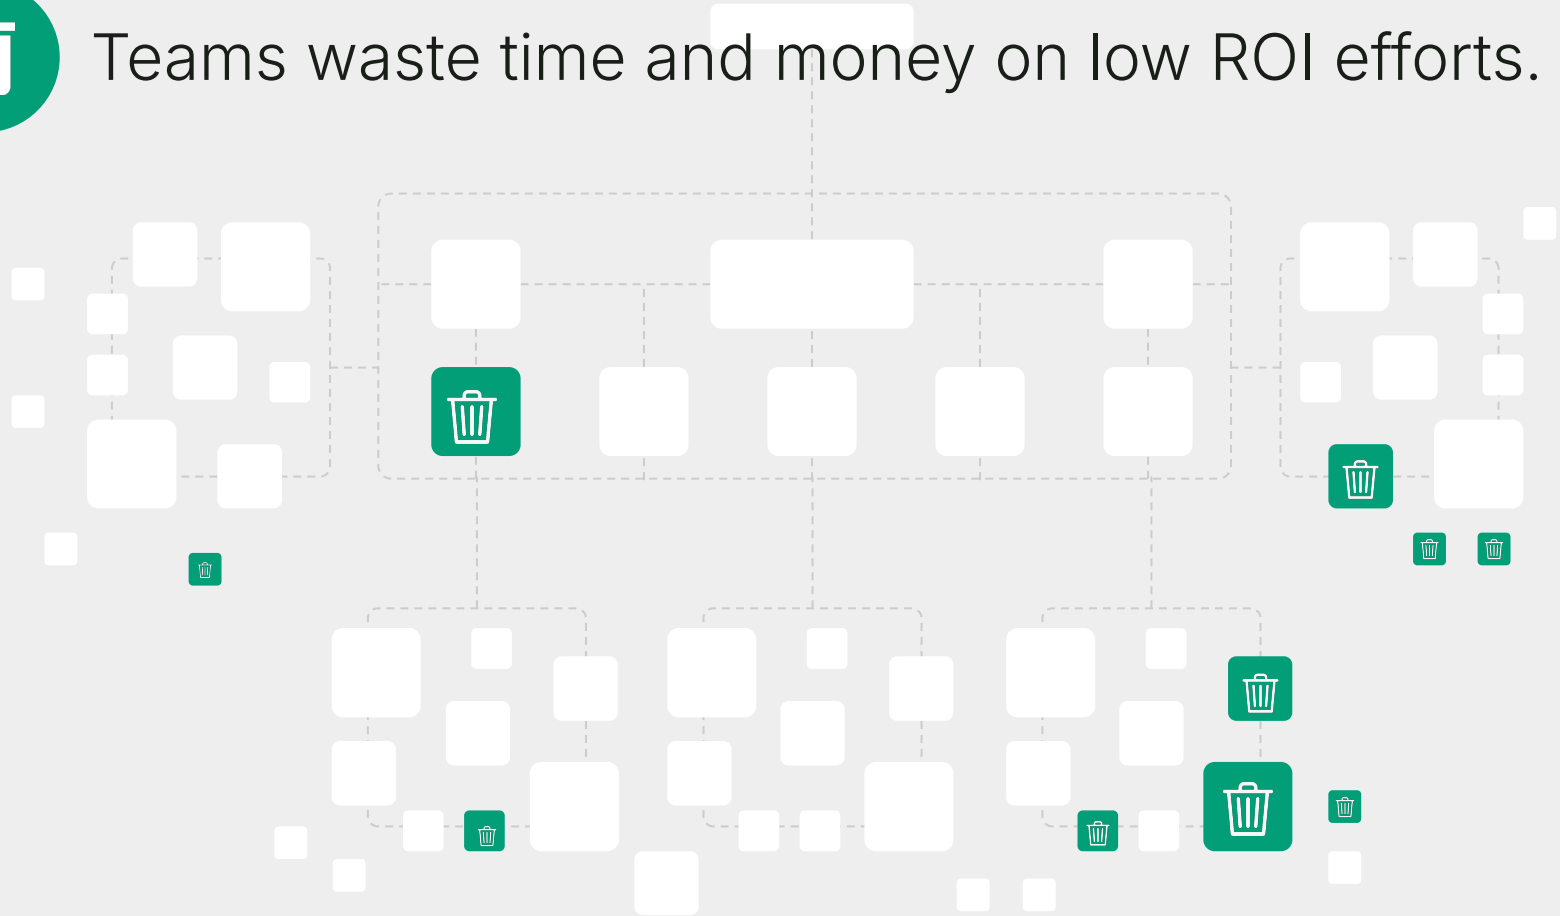

Support & funding isn't able to reach the highest ROI opportunities

Teams waste time and money on low ROI efforts.

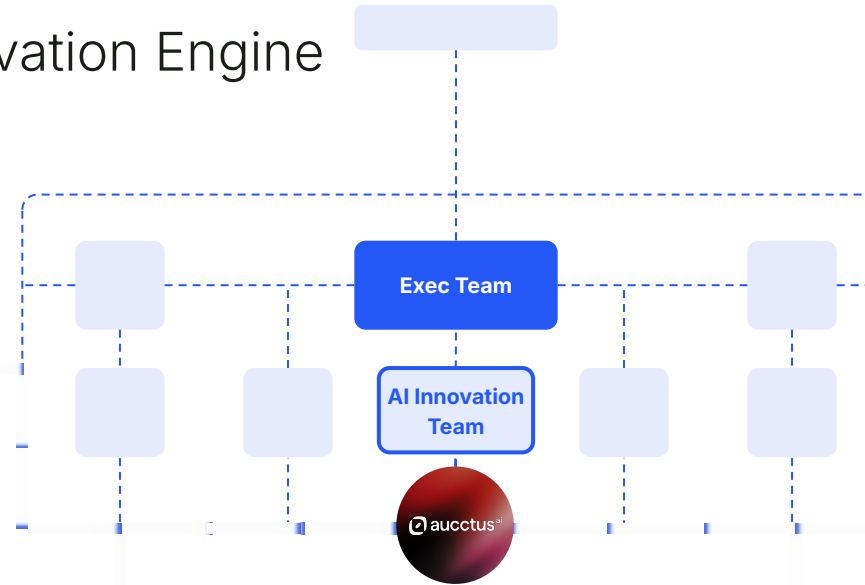

We've designed a system that fixes this.

It uses AI to turn innovation into something that's distributed,
accountable, and execution-first.

The End State:

Autonomous Innovation Engine

An always-on innovation operating system—with real-time dashboards, automated learning loops, and built-in governance that gives leadership total visibility and control over where innovation is happening, what's working, and what to invest in next.

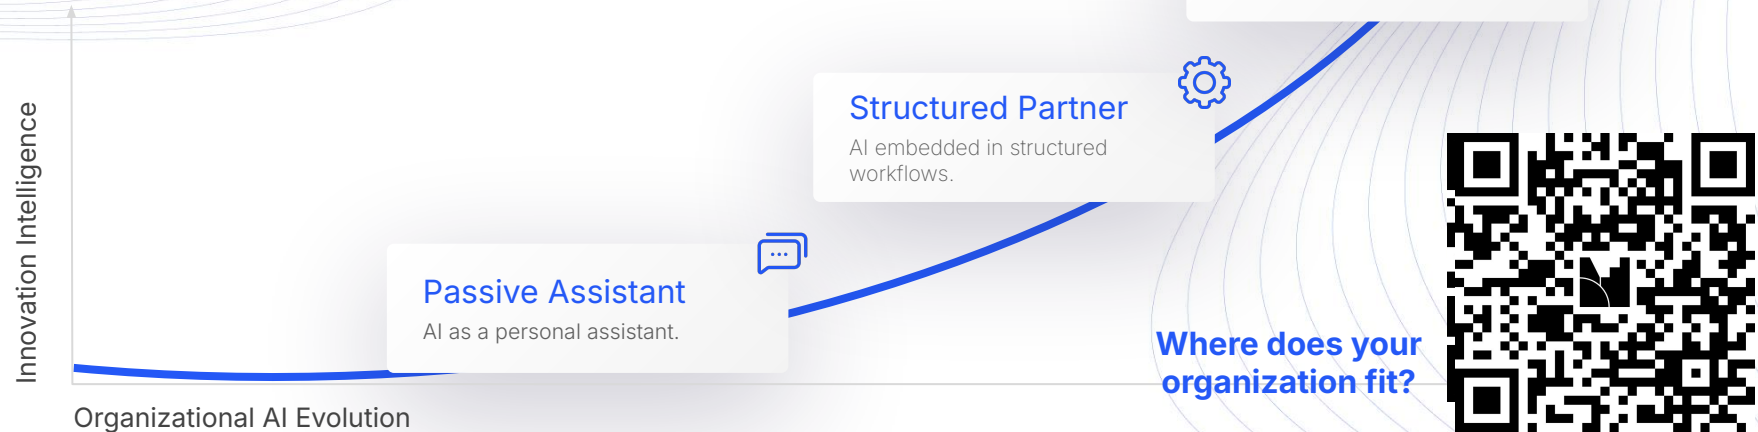

AI takes the lead within defined guardrails, initiating action and optimizing in real-time.

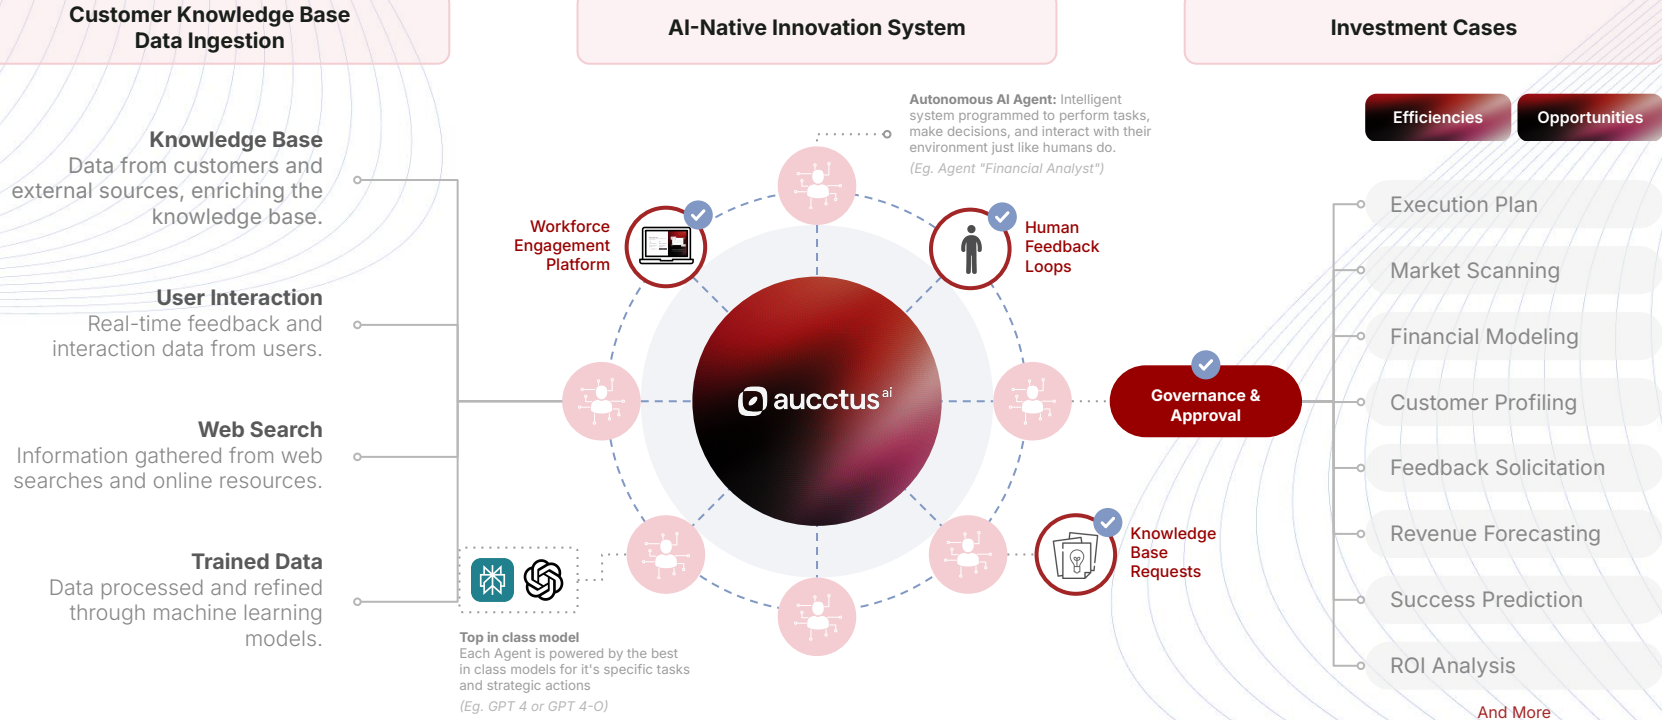

Why organizations need an *AI-native innovation system*.

AI pilots don't move the needle. Systems do.

To enable innovation at scale, organizations need more than tools—they need a system. That means embedding AI into how opportunities are identified, prioritized, and executed across every team. With the right structure, governance, and cultural adoption, companies can move from scattered efforts to a unified, enterprise-wide engine—climbing the innovation maturity curve from experimentation to consistent, high-impact execution.

Designing the *AI-Native Innovation System*

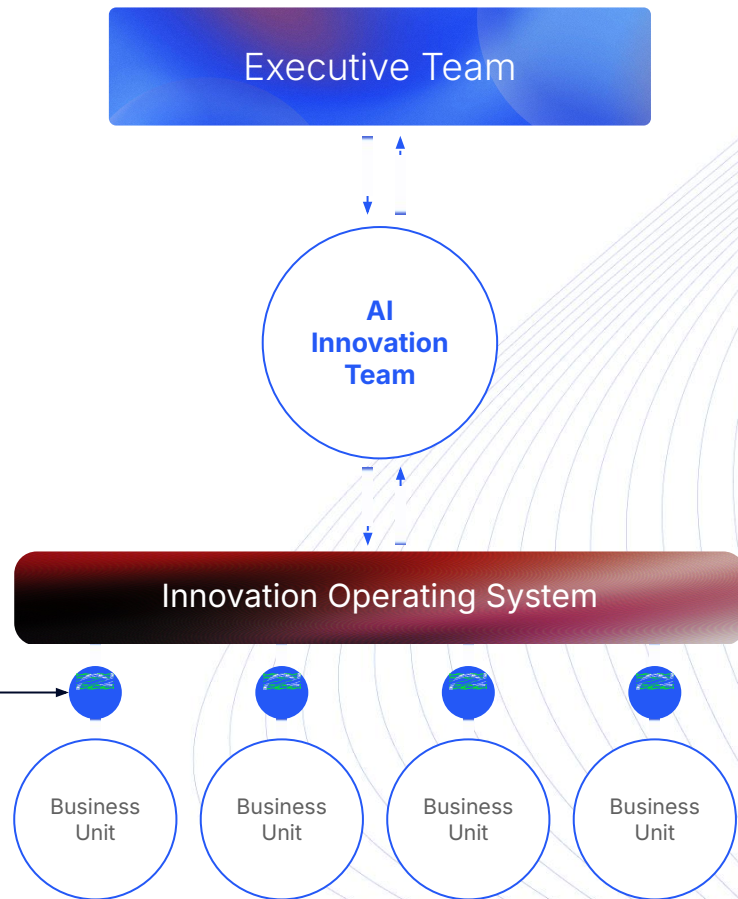

Governance and Operations *Layers*

Foundations that make the system work:

- Clear governance and decision rights
- A dedicated AI innovation team with defined roles
- Budget, tools, and infrastructure to support execution
- Strategic guardrails to align with business priorities
- Incentives that reward outcomes, not activity
- Strong KPIs to track progress and impact
- Ongoing training to drive adoption and capability building

As your workforce innovates inside the system, the system learns and will start recommending new efficiencies & opportunities.

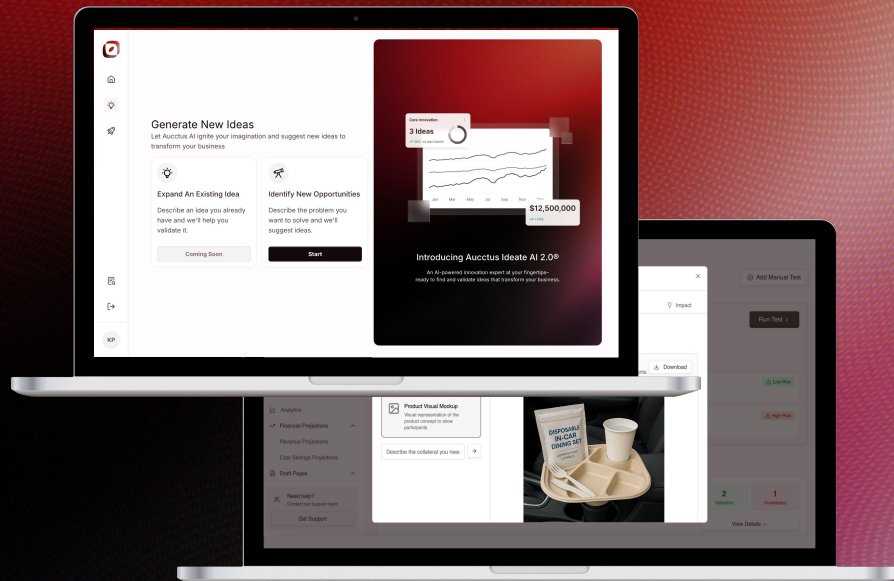

Empowering your workforce at scale.

Employee engagement is the foundation of decentralized innovation. We deploy Aucctus AI across your organization to enable every team to identify, prioritize, and act on the highest-impact efficiency & new value opportunities.

Our system structures workflows to surface ideas with clear ROI, accelerate testing, and support execution—turning innovation into a repeatable, scalable engine.

Built on best practices from the world's leading companies, Aucctus AI enables your workforce to innovate faster, smarter, and with purpose.

MIT Build Day Special:

How to get started?

1

AI Maturity Assessment

Benchmark your current AI readiness, identify high-ROI agent opportunities, and define clear, actionable scopes for AI projects.

- ✓ 1:1 stakeholder interviews
- ✓ 20–30 AI-assisted interviews
- ✓ Benchmark vs. top players
- ✓ Maturity assessment & risk map

2

AI Alignment Workshop

We help your team assess current capabilities, identify high-impact opportunities, and define a practical roadmap for AI adoption.

- ✓ Case studies tailored to your industry
- ✓ Use case funnel + investment matrix
- ✓ Facilitated alignment workshop
- ✓ Exec Ready roadmap for AI strategy
